CARE OF BALDWIN FINISHES

We recommend the following to help prolong the hardware finish:

- Wait until nearby surfaces that have been treated with acid or chemicals has been completed before installing the hardware.
- Do not use any type of harsh chemicals on Baldwin door hardware.
- Be sure all surface paint or stain is fully dried before installing Baldwin hardware.
- Remove hardware when re-painting and do not re-install until paint is thoroughly dry.
- Avoid hitting your hardware with rings, keys or other sharp instruments.

031 LIVING FINISH RECOMMENDED MAINTENANCE

This finish has been developed to age and patina over time. If you feel you do need to clean 031 finish use a soft cloth dampened with a mild, soapy water, and dry immediately with a soft cloth.

033 LIVING FINISH RECOMMENDED MAINTENANCE

Use rubbing alcohol and a soft cloth to remove any residual wax that may be on the hardware. Next, take a piece of Ultra Fine Scotch-Brite pad and randomly rub the hardware to remove any stains or dirt. Use a wood floor paste finishing wax, such as Minwax, and apply a light coat all over. Be sure to apply in the details of the hardware. Allow the wax to dry to a haze, then buff off the wax with a soft cloth.

102 AND 402 LIVING FINISHES RECOMMENDED MAINTENANCE

Treat new hardware as soon as it is installed with a thin coat of 3-In-One Oil or its equivalent, which can be purchased at a local home center. Coat the entire surface generously and let it stand for a few minutes. Dab off the excess with a soft material. Do not wipe the product as it could remove the oxidation from the hardware. We suggest repeating this process every couple of months, but over time areas that are touched by the hand will reveal the brass substrate below. Areas that are not touched will remain the same in appearance as long as the finish is maintained.

MAINTAINING OIL RUBBED BRONZE FINISHES

HOW IS THE FINISH CREATED?

Today Baldwin creates the 102 and 402 finishes through a process of oxidation of the material. The color you see is actually obtained by immersing metal in a special chemical solutions which, when properly heated, reacts with the material and causes oxidation. To preserve this appearance, we coat it with a thin coat of wax and oil.

HOW SHOULD THE FINISH BE MAINTAINED?

After the hardware has been installed, the oil and wax may have been wiped off or worn away. We suggest treating the new hardware trim as soon as it's installed with a thin coat of light oil. 3-IN-ONE Oil or its equivalent will suffice. Coat the entire surface generously and let it stand for a few minutes. Then wipe off the excess lightly with a soft material. Care must be taken when treating the hardware not to saturate the finished surface of the door. This procedure should be repeated as needed and will depend on the amount of use, exposure to weather and wear of the hardware.

HOW WILL THE FINISH AGE?

Over time the oxidation will be worn away in those areas that are touched by the hand and reveal pleasing copper alloy tones. Areas that are not touched will remain the same in appearance as long as the finish is maintained. The general look of well maintained oil rubbed bronze is one of the most beautiful and practical hardware finishes available today, however on-going maintenance is mandatory to preserve its appearance.

Turn Piece	6750.056	69
Emergency Release Trim	0416.056	71

INSTALLATION

Mortise Bolt Installation

- When installing Mortise bolts, ALWAYS check width of Emergency Release Trim before drilling face bore. Standard bore is .625" (16mm) completely through door. Emergency Release Trim 0406 and 0407 require a .5" (13mm) bore on outside face of door; a .625" (16mm) bore on inside face of door.

IMPORTANT: When Emergency Release Trim is used, the turn piece spindle must be cut to extend no farther than halfway through the bolt.

Tubular Latch/Mortise Bolt Installation

- When installing Mortise bolts with tubular latches, ALWAYS ensure that face plates of both mechanisms have a minimum of .5" (13mm) clearance between face plates [2.75" (70mm) minimum distance between center of bolts] for proper strike installation. If mortise bolt and latch/face plates are installed against each other (as illustrated), use 5528 Strike illustrated above, and on page 50.

CAUTION: WHEN ROSES OF 2.625" DIAMETER ARE USED WITH THIS STRIKE, TURN PIECES NOS. 6728, 6732, 6733, 6734, 6751, and 6762 CANNOT BE USED DUE TO CLEARANCE RESTRICTIONS.

NOTE: 5528 strike is designed with a curved lip. Please specify hand of door when ordering. Hand of strike based on latch bolt being installed below the mortise bolt. Tubular latches and mortise bolts may be used in conjunction with escutcheons. Use of 5528 Strike is required to replace normally furnished strikes due to clearance restrictions.

IMPORTANT: When Emergency Release Trim is used, the turn piece spindle must be cut to extend no farther than halfway through the bolt.

- **Communicating Door Kit:** For use in conjunction with Baldwin patio deadbolt

- Function: Security between (hotel) rooms with limited space between doors
- Communicating door side compatible with any LARGE thread-on rose style (5048 rose included)

Commonly found between two hotel rooms where a functional latch is still required, and limited space between doors does not allow for trim to be installed on exterior sides.

Rim Lock Mechanism

Pride in our American Heritage and renewed interest in its early history has greatly influenced U.S. architecture. With careful research and design, Baldwin has authentically reproduced a piece of that heritage – colonial rim locks.

- Constructed with solid forged brass parts for exceptional durability and smooth operation
- Trim designs secured to a broached spindle with an epoxy (resin) coated set screw – prohibits screw from loosening
- Interior rim locks use bit keys. Bit keys may be ordered fixed permanently into the lock by ordering as .RBIT or .LBIT configurations
- Rim locks are sold as sets with 5030 knob included
- Split finish requests are subject to 5% list price adder
- 1.375 minimum door thickness is required

A typical application requires active cremone bolts mounted on each leaf of a pair of doors with no exterior access.Specify cremone bolt less knob (LK) or less lever (LK), and order knob or lever minus rose (MR) of choice as a separate item.

SPECIAL CONDITIONS: When specified, most trim as illustrated in the knob/lever section is available for the exterior side to latch door. Indicate knob or lever to be furnished. For doors larger than 8ft. in height, the addition of a Cremone Bolt extension packet is necessary. See table below.

FEATURES: Dustproof strike is ideal for concrete installations. Large size plate and the spread of screw holes have better holding power in concrete slabs. This dustproof strike can be used for installation in metal thresholds by removing the face plate. To install, drill 1″(25mm) diameter hole and tighten lock nut. To lock the strike for pedestrian traffic, insert a coin in slot and turn clockwise. To convert for flush bolt use, turn counterclockwise.

PACKED: Solid brass locking type dustproof strike with face plate, machine screws and expansion shields.

NOTE: For use with 0600 Flush Bolt only.

MORTISE HINGE SPECIFICATIONS

FEATURES: Extruded brass, full mortise hinges are machined for precise installation and smooth movement. Knuckles are milled to a clearance of 0.010"(.25mm) to minimize vertical wear. Each hinge is beveled on the inside leaf to obtain a tight fit when viewing the hinge in a closed position, and furnished with stainless steel, rust-proof pins for added durability.

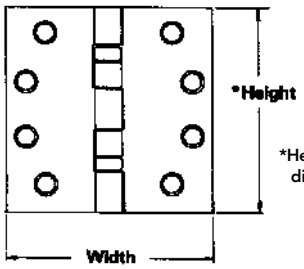
PIN DESIGN: Each pin is manufactured from precision ground Type 302, stainless steel material to prevent corrosion. The pin "floats" within the barrel of the hinge, yet is held in a stationary position. Pins can be removed by unthreading each finial and tapping the pin upward from the bottom of the barrel.

FINIAL DESIGN: Hinge finials are specially designed to thread into the top and bottom of the hinge barrel, preventing the pin from rising out of the hinge barrel. All tips are completely interchangeable to facilitate stocking and eliminate excessive inventories. Finials can be purchased separately in sets of four only. Hinges are furnished standard with button design finials.

FASTENERS: All full mortise hinges are supplied standard with appropriate size wood screws as noted on chart. Wood screws are fully threaded to the head and have an undercut head for secure installations.

BEVELED EDGE: Each Baldwin hinge is beveled on the inside leaf to obtain a tight fit when the hinge is in a closed position.

EXTRUSION: Hinges manufactured from solid brass extrusions have two inherent properties: exceptional strength and precision tolerances. Baldwin's extruded hinges are machined from a solid brass bar to exact tolerances to ensure an even wear between each knuckle. The result is a QUALITY hinge which can withstand above average door weights and stresses with maximum vertical and lateral wear performance.



***Height of hinge is always first dimension not including tip.**

TEMPLATE: All full mortise hinges illustrated within this section are designed in accordance with the most current specifications established by the American National Standards Institute (ANSI).

APPLICATION: Baldwin full mortise hinges are classified as STANDARD WEIGHT for installation on doors up to 1.75"(44mm) in thickness.

NUMBER OF HINGES: Use three hinges on doors up to and including 7.5 feet (2.3m) and one additional hinge for each additional 2.5 feet (.76m) or fraction thereof.

NON-REMOVABLE PINS (NRP): Hinges can be obtained with non-removable pins to prevent removal of hinge pins when the door is in a closed position. This special application is used when the hinge barrel is exposed to the exterior side of a building (Reverse Bevel Door Conditions). A stainless steel set screw is inserted into the barrel from the inside of the hinge (Emblem Mark Side), which intercepts a groove milled on the pin. (Not available on Hinge No. 1030). Furnished at an additional charge. Specify as follows: 1 pr 1040.030 NRP Hinge - 4"x 4"= 1040.030.NRP

METAL DOOR APPLICATION: Machine screw packets are available to accommodate mortise hinge installation for metal doors.

- All hinges have a slight offset leaf which provides clearance of .077"(2mm) when leaves are closed and parallel.
- All hinges have template screw hole locations for use on either wood or hollow metal doors and frames.
- Pins are manufactured from precision ground, stainless steel material.
- All finials are threaded into the barrel of the hinge to prevent pin from rising.
- Finials are completely interchangeable with all full mortise hinge sizes.
- Furnished standard with Phillips head wood screws, undercut, fully threaded to the head.
- Inner leaf is beveled to ensure the tightest possible fit and enhance hinge appearance.
- Available with a Non-Removable Pin (NRP) feature (except No. 1030).

BALL BEARING HINGE SPECIFICATIONS

Each hinge is designed with two anti-friction ball bearing assemblies which are non-detachable. The balls inside each chamber are constructed from through-hardened, chrome alloy steel material to ensure a longer hinge life. The bearing races are machined from alloy steel which is then hardened and electroplated with a rust-resisting zinc-chromate finish. Our testing indicates that although this electroplate finish provides rust protection, when exposed to weather elements of exterior, the steel will eventually rust. The location of each assembly increases the vertical load capacity and greatly reduces both vertical and lateral wear of the hinge. As a result, all factors which normally contribute to hinge failure are significantly reduced. BALL BEARING HINGES ARE RECOMMENDED FOR DOORS EQUIPPED WITH DOOR CLOSERS AND/OR RECEIVING AVERAGE FREQUENCY SERVICE.

APPLICATION: STANDARD WEIGHT BALL BEARING hinges are designed for medium weight doors receiving average traffic in residential and light commercial construction. Ball bearing hinges are ALWAYS recommended for doors equipped with door closers.

This warranty does not cover scratches, abrasions, deterioration due to the use of paints, solvents or other chemicals, abuse, misuse, or product used in commercial applications.

Limited Lifetime Finish™ Warranty: The Baldwin Lifetime Finish uses advanced finishing technology (physical vapor deposition) to create a finish highly resistant to the effects of weather and normal wear and tear. The Limited Lifetime Finish Warranty on Lifetime Finish™ products covers the original purchaser for as long as you own your home.
