Bringing light to life has been our passion for over 80 years.

So, why skylights?

In 1941 in the Danish city of Copenhagen, a young engineer came up with the idea to transform dark, empty attics into bright living spaces. This idea developed into the first handcrafted, no-leak roof window, which became the foundation for VELUX to grow into the number one skylight company in the world.

At VELUX, we believe homes full of light are homes that are full of life, that daylight is powerful and fresh air is invigorating. Together, they improve our general health and well-being, decrease our dependence on electricity, and give functionality back to our space. As we adjust to a new normal and spend more time at home, VELUX Skylights help bring the outside in, delivering unmatched quality, beautiful results, and a brighter home for your family.

Some may ask, "Why skylights?" But with endless reasons to install one, the question becomes more, "Why not skylights?"

Our Goal **LIFETIME CARBON NEUTRAL** by 2041

Wood is a primary material in VELUX skylights, so we have a direct obligation to ensure our wood sourcing does not have negative consequences for the environment. That's why we've partnered with the World Wide Fund for Nature (WWF International) to capture our historical CO₂ emissions through forest conservation, and why we pledge to reduce our future carbon emissions to be Lifetime Carbon Neutral by 2041.

[Read More >](#)

**“ We are committed to become
Lifetime Carbon Neutral by
2041 by capturing 100 years of
CO₂ emissions and reducing our
future carbon footprint.”**

David Briggs
CEO of the Velux Group

**A plan for the future
that starts with our past**

Visualize Your Room in a Whole New Light!

With the new VELUX Visualizer app, we've made it easier than ever to reimagine any room in your home. Using your device's built-in camera, this augmented reality app allows you to add, customize, and explore our skylight products in real time. Picture a beautiful, healthier home with natural daylight and fresh air from VELUX skylights.

Kitchens | **Cooking In Daylight**

A happy, healthy kitchen is one that is full of light and fresh air. When we think of kitchen upgrades, we tend to look around - at cabinets, appliances, and paint colors - instead of looking up. Enhancing your cooking area with natural light through skylights is one of the best ways to get the most out of the sights, smells, and even tastes created in your kitchen.

Skylights Bring the Outside Into the This Old House Modern Barnhouse

Designer Amy Matthews, along with D/O Architects and Hartman Homes, decided to combine love of the land with a modern design aesthetic for the This Old House Modern Barnhouse.

"To me, it was about clean lines, simplicity in design, openness, and a connection through windows and skylights to the outdoors," Amy said. "Because this is such a stunning valley, I wanted to do as much glazing as possible to be able to integrate the outdoors and the inside." For Amy, this meant using skylights throughout the home to enhance its look, feel, and function.

Three VELUX Solar Powered "Fresh Air" Skylights with solar-powered shades are installed in the main bathroom, stairwell, and children's room, bringing natural light into the home all throughout the day. And because the Modern Barnhouse property is lined with trees, the combination of skylights and lush, private surroundings creates a luxurious treehouse setting within the home.

Additionally, all of the skylights can be opened with a remote control or the VELUX ACTIVE app on Amy's phone. A key benefit of venting skylights in the Modern Barnhouse's 15-foot ceilings is that they can create natural airflow that removes the rising hot air while cooling down the whole home.

A New Skylight Is Just What This Old Loft Needed

New skylight cut-ins are transformative in any space, but replacing existing skylights can be just as awe-inspiring. That's what Sarah Dorsey, the interior designer, DIYer, and blogger behind Dorsey Designs, learned when renovating the loft bonus room of her 1979 post and beam home as part of the Spring 2020 One Room Challenge.

The loft, like the rest of the home, featured light reddish-brown wood paneling, as well as a 1980s era VELUX Skylight. After re-staining the hardwood floors and painting the walls and ceiling white, Sarah replaced the old skylight with a new VELUX Solar Powered "Fresh Air" Skylight with solar-powered shades to brighten the space even more while providing natural ventilation.

Over the course of the renovation, Sarah saw an opportunity to create a second upper loft as a reading nook and install another solar-powered venting skylight. In the completed space, the two new skylights bring in ample light and functional comfort. And because of the loft space's open design, the natural light and fresh air that pour in through the skylights overflow to the lower-level living space for an overall brighter floorplan.

Before:
This 1980s-era loft was in desperate need of a design and daylight upgrade.

Two Sun Tunnel® Skylights Make a Big Difference in This Small Bathroom

Molly Madfis, the Los Angeles-based blogger behind Almost Makes Perfect, was stuck with a primary bathroom that was updated by the previous owners. An already small space, the bathroom's dark vanity and countertop paired with gray stone tile created a cave-like appearance that was a clear departure from Molly's signature style.

With the bathroom's remodel, Molly created a bright, welcoming space in a minimalist Scandinavian meets boho-chic style. She installed matte off-white glass floor tiles, bronze hardware, and natural wood grain patterned vanity and medicine cabinets. And instead of an overhead light, Molly opted for two VELUX Sun Tunnel® Skylights over the shower to illuminate the room.

"I knew the room was dark before," Molly wrote about the renovation, "but wow what a difference!" The 14" Sun Tunnels, which look like recessed lighting, provide abundant light while also reducing the number of fixtures in the room. The Sun Tunnels also feature built-in nightlights so her family doesn't have to turn on the lights during nighttime bathroom trips. Overall, the bathroom's two Sun Tunnels help provide an open, airy feeling without a hardware overload.

Before:

The bathroom's two VELUX Sun Tunnels® helped provide abundant light to the dark space.

@madebycarli

This Dark Living Room Got a Bright Makeover

Carli Alves, a home decor, DIY, and interior design blogger, was in for a real lighting challenge when she took on this 1945 Colonial fixer-upper. She and her husband fell in love with the natural light that poured into the east-facing side of the house, but the other side told a darker story.

What was once a living room was now an oversized dining room with one window. Just off there, a sunken living room addition and old metal screened porch blocked any light that could come in from vertical windows. So, Carli looked up - to flat popcorn ceilings less than 8 feet tall. To create a living room people actually wanted to use, big changes were needed.

Those big changes meant vaulted ceilings and skylights. While vaulted ceilings aren't necessary to install skylights, Carli felt they would help make the space feel lighter and more welcoming. Two VELUX Solar Powered "Fresh Air" Skylights were installed in the new ceiling and, along with a fresh coat of paint, new furniture, and new decor, the transformation was complete.

After the makeover, Carli said, "We went from a dark and cave-like space to a light, bright and airy room that we actually want to spend time in." And the best part? Not only do the skylights bring in abundant natural light, they also allow fresh air to flow into the home.

Natural Light Is the Centerpiece of This Kitchen Renovation

When Oahu-based interior design influencer Sachi Lord first looked at the house where she now lives, the thing she loved most about its kitchen was the beautiful vaulted ceilings. But the ceiling's rich wooden color made the room seem dark. Rather than paint or replace the wood, Sachi opted for skylights.

Sachi first saw the transformative power of skylights on the Australian show, "The Block," when one of the contestants added skylights to their kitchen. "My jaw just dropped watching the reveal," Sachi said. "I knew VELUX Skylights were the answer to my dark kitchen conundrum."

Through her research, Sachi also found out that VELUX Skylights have venting capabilities and rain sensors - two key benefits for Hawaii's humid weather and frequent afternoon showers. The kitchen's white color scheme and mixed metal decor also benefit from the abundant natural light. "We comment almost every day about how much of a difference the natural light makes," said Sachi. "Our glossy backsplash tile shines, quite literally, and the natural brass dome pendant almost seems to glow. I just love it."

Before:

The dim kitchen lighting made it difficult to enjoy the beautifully crafted vaulted ceilings.

“ I knew VELUX Skylights were the answer to my dark kitchen conundrum. ”

A Skylight Here, A Sun Tunnel There for a Home with Natural Light Everywhere

Interior designer Shavonda Gardner first fell in love with skylights during her bathroom renovation, where a Solar Powered "Fresh Air" Skylight was the perfect solution for bringing in natural light and ventilation. As we all know: If you install a skylight in one room, you'll want to install skylights in another!

"Once we got our first taste of that skylight life," Shavonda wrote on her blog, "I sought to find even more areas to incorporate them into our home." So, she partnered with VELUX once again to install skylights in her bungalow kitchen. With four windows, the kitchen already had ample natural light, but two Solar Powered "Fresh Air" Skylights helped to amp up the natural ventilation and keep the space cool while whisking away any cooking smells. Shavonda was also able to change the layout of her kitchen and close up one of the vertical windows without losing any light thanks to the skylights.

For another way to incorporate natural light in her home, Shavonda looked to her hallway. What most people saw as a way to get from one room to another, Shavonda saw as the perfect opportunity to create a "visual moment." Like most hallways, Shavonda's wasn't the easiest to illuminate, but it was the perfect candidate for a VELUX Sun Tunnel® Skylight.

Before the Sun Tunnel was installed, the hallway's deep blue shibori patterned wallpaper and intricately patterned vintage rug blended into the dark, narrow area. With the Sun Tunnel, Shavonda's carefully planned hallway decor can be fully appreciated under clear, bright natural light.

Before:
Shavonda's hard-to-light hallway was the perfect space for VELUX Sun Tunnels.

"Once we got our first taste of that skylight life, I sought to find even more areas to incorporate them into our home."

A Skylight for Every Ceiling

[Read More >](#)

Flat, Attic, Cathedral, Vaulted

Have you ever considered skylights, then looked up at your flat ceiling and thought there's just no way? You're not alone! One of the most common skylight misconceptions is that they can only be installed in vaulted ceilings. But we're here to tell you that's not the case.

Flat Ceiling

If you have flat ceilings, your skylight installer will construct a drywall light shaft to connect your skylight and ceiling. This helps direct daylight to your room below while hiding the attic space between your ceiling and roof.

Attic

If your attic has obstacles like HVAC units, you can still add natural light to the rooms below. Sun Tunnel® Skylights fit between ceiling supports, allowing bright, clear daylight to fill the space below uninhibited.

Cathedral Ceiling

The advantage to cathedral ceilings during skylight installation is that without attic space between the roof and your home's interior, there's no need for a light shaft. So, once your skylight is installed, the work's all done.

Vaulted Ceiling

Similar to cathedral ceilings, vaulted ceilings feature a single sloping side or arched slope. This style may require a light shaft to cover any attic space between your room and skylight.

3 Types of Installation

[Read More >](#)

Deck-Mounted, Curb-Mounted, Self-Flashed

There are three different methods for skylight installations. To know which method is right for your home, a skylight installer or roofer will evaluate the roof pitch (slope), roof material, and ceiling type. If you're replacing skylights, they will also take note of the method used to install them. But whatever method works best for your home, you're installing the same great skylight that brings in plenty of natural light and fresh air!

1 Deck-Mounted Skylights

Skylights that are deck-mounted have frames that are nailed directly to the roof-deck. This installation method allows the skylight to have a low profile and blend seamlessly with the roof. Deck-mounted skylights are ideal for new construction homes or for brand new skylight cut-ins.

2 Curb-Mounted Skylights

Curb-mounted skylights are installed on top of a wooden frame or "curb." The curb is attached to the roof first and made watertight, then the skylight is secured to the top of the curb. Think of it as a shoebox: the curb is the box and the skylight is the top. Curb-mounted skylights are the most common installation method for low-slop or flat roofs.

3 Self-Flashed Skylights

Self-flashed skylights differ from both deck- and curb-mounted skylights because their curb and flashing are built into the skylight. No extra flashing kit is needed. The skylight sits directly over the rough opening in the roof deck and is then sealed.

Flashing Systems

[Read More >](#)

Deck-Mounted, Curb-Mounted

VELUX Skylight Flashing Kits are a crucial part of our complete system designed to shed water without relying on sealants that can break down over time. No matter the scope of your project, we offer a variety of skylight flashing systems to ensure a weather-tight fit for virtually all roof types and slopes so you can easily install the skylight of your dreams.

Deck-Mounted Flashing Systems

Each of our deck-mounted flashing systems is made up of a pre-attached deck seal, adhesive underlayment, and engineered flashing. They attach directly to your roof deck and interweave with the roofing material to ensure your skylight won't leak.

Curb-Mounted Flashing Systems

VELUX curb-mounted skylights have a pre-attached skylight gasket, which provides a tight seal between the site-built curb and skylight. When combined with our curb-mounted engineered flashing and adhesive underlayment, they create a seal to ensure no water leaks around your skylight.

No Leak Warranty

3 Layers of Protection

The No Leak Promise is our guarantee to you that the VELUX skylights installed in your home will not leak. We're able to make and keep this promise with a 10-year installation warranty thanks to our patented three layers of water protection on our deck- and curb-mounted skylights.

1

Pre-Attached Seal

Pre-attached deck seal (deck-mounted) or gasket (curb-mounted) provides a tight seal for leak-proof installation.

2

Adhesive Underlayment

Adhesive underlayment for secondary water protection against the harshest weather conditions.

3

Engineered Flashing

Engineered flashing for easy installation and primary water protection.²

Rest easily beneath your skylight knowing it will provide abundant sunlight and fresh air, but never let in rain.

Sun Tunnel® Skylights

Sun Tunnel® Innovations
Sun Tunnel® Skylights

Every room in your home deserves to be filled with natural light – even those in the very center of your home. Unlike traditional windows and skylights, VELUX Sun Tunnel® Skylights can be installed virtually anywhere in your house in a single afternoon and at a fraction of the cost.

- 1 Low-Profile Appearance:** A variety of pitched and low-profile light-collecting domes are available to help Sun Tunnels® blend seamlessly into any roofline.
- 2 Highly Reflective Tunnel:** Delivers maximum sunshine from the roof to your ceiling due to the reflective material of the tunnel.
- 3 Versatile Design:** Fits between rafters and around other obstructions in your attic, making the Sun Tunnel® one of our most versatile skylights.
- 4 Additional Lighting:** For a moon-like nighttime glow or to flip a switch for light any time, Sun Tunnels® are compatible with a number of accessories to provide you complete light control day and night.

Flat Roof and Roof Access Skylights

- Designed for homes with flat or low-slope roofs
- Virtually impervious to damage with a maintenance-free PVC curb with insulation and tempered glass
- Innovative curve shape easily whisks away rainwater
- Protective cover reduces the chance of condensation and minimizes outdoor noise
- CXP opens manually up to 60° for instant roof access

Note: Both base unit and top cover must be ordered to make a complete skylight unit.

The background image shows a creative workspace. A corkboard is mounted on a wall, displaying various items like a small framed picture, a checkered pattern, a black and white photo of a person, a blue card with a white flower, a blue card with a white abstract shape, a blue card with a white tree, and a small black and white photo of a person. A black desk lamp is positioned on the left. A wooden desk holds a laptop, a wooden keyboard, a wooden mouse, a wooden pen holder with pens, a wooden cup, a wooden notebook, and a wooden box. A skylight is visible in the upper right corner, letting in natural light.

Testing Data

VELUX rigorously tests the materials of our skylights so you can rest assured that the products installed in your home are safe.

For our most up-to-date data, visit veluxusa.com/testing-data.

ENERGY STAR®

One of the most straightforward ways to help meet energy codes as a builder or architect, while still designing bright, airy buildings, is to specify ENERGY STAR® certified products.

Most VELUX residential products are ENERGY STAR® certified in all 50 states, which means they meet energy efficiency standards set by the US Environmental Protection Agency (EPA). In order to be ENERGY STAR® certified, fenestration products must have their U-factor, Visible Transmittance, and Solar Heat Gain Coefficient ratings independently tested and approved under the FenStarSM Certification Program of the National Fenestration Rating Council (NFRC) to qualify.

By using ENERGY STAR® certified products, architects and builders can use skylights to bring much needed daylight and fresh air inside, allowing them to create more attractive buildings and more livable spaces while still meeting local energy codes.

In warmer climates, there is great potential for lighting energy savings by using emerging control technologies like VELUX ACTIVE or more effective daylighting products like VELUX skylights with shades and Sun Tunnel® Skylights.

Visit energystar.gov for more information.

Code Compliance

VELUX offers a broad array of skylights, roof windows, and Sun Tunnels® that meet the applicable performance requirements and testing and labeling standards written into the most current US Model Codes:

- 2018 IBC (International Building Code)
- 2018 IRC (International Residential Code), and
- 2018 IECC (International Energy Conservation Code),
- As well as local and regional codes based on the above codes.

Additionally, electrical components built into VELUX products are UL listed.

Standard VELUX residential skylights and Sun Tunnel® products meet the current and prior North American Fenestration Standards (NAFS), also known as AAMA/WDMA/CSA 101/I.S.2/A440. Copper-clad versions may not exceed these requirements but do meet other standards required of them.

To verify these attainments on-site, the products are shipped with all required labels to expedite the inspection and final acceptance process. VELUX confidently certifies through these labels that only products consistent with the tested specimens are sent to the job.

- ¹ For the most up-to-date Federal Solar Tax Credit information, visit veluxusa.com/go-solar.
- ² To qualify for the VELUX 10-year installation warranty, VELUX flashing must be purchased. The 10-year installation warranty excludes EVMS, EV, QPF, EF.
- ³ VELUX shades are not available for any VELUX custom-sized skylights. VELUX shades when purchased with a standard size accessory tray are available for select E-Class skylights.
- ⁴ Consult local code officials regarding egress requirements as they may vary by jurisdiction.skylights.

Warranty

For 80 years, VELUX has been dedicated to producing skylights that are synonymous with quality and reliability. Our commitment to you does not end once your skylight is installed.

The VELUX deck- and curb-mounted product family is designated as "The No Leak Skylight." It carries a 10-year installation warranty, plus 20 years on glass seal failure, 10 years on product, and 5 years on shades and controls.

This limited "No Leak Skylight" warranty does not apply to VELUX products purchased prior to January 1, 2010.

NOTICE: ALL GLASS MAY BE SUBJECT TO UNEXPECTED AND SPONTANEOUS BREAKAGE in rare circumstances due to imperfections in the glass that are undetectable during the manufacturing and inspection process by the manufacturer of the glass and VELUX.

VELUX offers the choice of laminated or tempered glass skylights. Impact glass and comfortplus glass are all types of laminated glass. Comfort glass is a type of tempered glass. Laminated glass is a combination of two or more glass sheets with one or more interlayers of plastic (PVB) or resin. In case of breakage, the interlayer is designed to hold the fragments together. Tempered glass does not contain an interlayer to hold the fragments together. Instead, tempered glass is designed to break into small, pebble-like pieces. When tempered glass breaks, pieces of glass come loose and may strike an individual.

CONSULT LOCAL REGULATIONS AND/OR BUILDING MATERIAL CONSULTANTS TO DETERMINE WHICH TYPE OF GLASS IS RIGHT FOR YOU OR IF LAMINATED GLASS IS REQUIRED IN YOUR APPLICATION.

All VELUX skylights, roof windows, Sun Tunnel® Skylights, flashing kits and shades must be purchased through a qualified VELUX dealer. Please see the "Where To Buy" section of veluxusa.com website for a list of VELUX dealers near you.

The VELUX Group creates better living environments with daylight and fresh air through the roof. The VELUX product program contains a wide range of roof windows and skylights, along with solutions for flat roofs. The Group also supplies many types of decoration and sun screening, roller shutters, installation products, and products for remote control for installation in roofs. The VELUX Group, which has manufacturing companies in 11 countries and sales companies in nearly 40 countries, represents one of the strongest brands in the global building materials sector and its products are sold in most parts of the world. The VELUX Group has about 10,000 employees and is owned by VKR Holding A/S, a limited company wholly owned by foundations and family. For more details, visit velux.com.
