

PRIMED STILE & RAIL

 REEB° IN-STOCK INTERIOR PRIMED STILE & RAIL DOORS

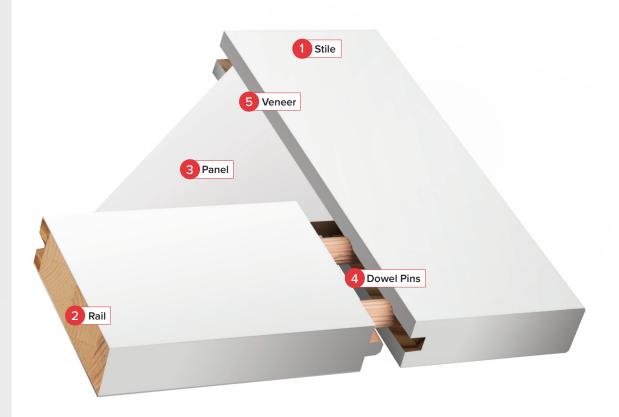

Primed Doors

CONSTRUCTION

Primed stile and rail doors are an ideal choice for homeowners seeking to add a clean look to their Modern, Traditional or Craftsman style homes. They feature architecturally correct layouts, crisp shadow lines and highly defined panels providing a superior level of detail.

Recent developments within the millwork industry continue to strengthen the case for primed stile and rail doors, making them an excellent choice for discerning homeowners seeking increased strength, better durability and greater life expectancy at a similar price point to their molded door counterparts.

- 1 Stile: The stiles have a solid wood engineered core for added strength, stability, and reduced sound transmission.
- 2 Rail: The rails also include a solid wood engineered core.
- **Panel:** Flat and Raised Panels are made with MDF for smooth paint finish, stability, and comply with no added formaldehyde regulation.
- **Dowel Pins:** Traditional dowel pins construction creates a secure joint, connecting the stile and rail components together.
- **Veneer:** An MDF veneer is permanently bonded to the engineered wood core, eliminating dents, dings, and gouges which makes for a superior paint surface.

- 1 True 90 degree angle provides sharp detail.
- 2 Solid wood engineered core for added strength, stability and reduced sound transmission.

Flat Panel Raised Panel

Panel Design

Reeb offers many flat panel and raised panel door designs in the most popular layouts. The panels in a primed stile and rail door are made from MDF.

Sharp Detail

Primed stile and rail doors join components together to create sharp shadow lines with a greater definition than a molded door.

Architectural Precision

Each door is made with perfectly proportioned stiles, rails and panels that are created individually to ensure that every door is architecturally correct.

Finishing

The surface of a primed stile and rail door is smooth for a better painting surface than molded products.

Primed RAISED PANEL

Primed doors allow for a better paint finish and color match process for any project.

For homeowners seeking a painted look, popular interior door choices include molded doors and primed stile and rail doors. Molded doors are an economical choice. Primed stile and rail doors offer a level of detail and definition that cannot be matched, with crisp shadow lines and highly defined panel details, due to their authentic construction.

Reeb's primed door offering has expanded with the addition of modern-style and shaker-style contemporary doors. They feature a smooth surface that is perfect for painting in any color. Both styles of primed doors complement one another in a home setting and blend well with our new EZY jamb system offering.

Modern-Style Contemporary Doors

Reeb's modern-style contemporary doors are a premium flush door. While traditional flush doors have a thin veneer over a solid particle core, any groove cut into the door for a design appeal must be shallow. Our new contemporary flush doors feature a 1/4" thick veneer. The grooves are cut 1/8" deep resulting in sharper shadow lines and a greater definition.

The new contemporary doors have a unique lattice wood core that provides exceptional strength and improved stability. It has the feel of a real wood door without the weight that can lead to hinge issues. These doors can be prepped for the typical backset options or even a mortise pocket.

For a consistent design, the strike side will always be on the stile line side of the door.

Reeb's new Contemporary Louver Door has shaker-style sticking and a unique slotted ventilation. Cut at an angle into the panel of the door, flat slotted louvers give the same ventilation possibilities but with a different aesthetic appearance. This contemporary door pairs well with other shaker-style flat panel doors.
